

CDR

Direct and Remote Data Entry

The Direct and Remote Data Entry system consists of the accounting of votes counted by the electoral authorities,

INTRANET / INTERNET

COMPUTER CENTER

Totalization and Publication of Results

It allows data entry in digital form through a web interface, with SSL authentication mechanisms

CITIZEN

Monitoring provisional scrutiny results

ELECTION OFFICIALS AND REPRESENTATIVES OF THE POLITICAL PARTIES

Monitoring provisional scrutiny progress

It allows data entry by the capture and agile transmission of results, replacing the traditional retrieval of the voting station's results, and ensures the information -validated by the election authorities, in presence of partisan fiscals- enters automatically in the counting process.
